Research Summary

Composite rebar, also known as fiber-reinforced polymer (FRP) rebar, is a type of reinforcement used in construction and civil engineering applications. Unlike traditional steel rebars, which are made of carbon steel, composite rebar is constructed with fibers, such as glass, carbon, or basalt, embedded in a polymer matrix, often epoxy resin. This combination of materials makes composite rebar lightweight, corrosion-resistant, and non-conductive, offering several advantages over conventional steel rebar. It is particularly suitable for use in corrosive environments, marine structures, bridges, and structures near coastal areas. Composite rebar is also more durable and has a longer service life, reducing maintenance and repair costs. Its non-metallic nature makes it an ideal choice in areas where electromagnetic neutrality is essential, such as in medical facilities or buildings with sensitive electronic equipment. Additionally, composite rebar is easier to handle and transport due to its lighter weight, making construction processes more efficient. As sustainable building practices gain importance, composite rebar provides an environmentally friendly alternative to traditional reinforcement materials.

The major global manufacturers of Composite Rebar include Aslan FRP, Schoeck, Armastek, Galen, Dextra Group, FiReP, BP Composites (TUFF-Bar), Pultrall, Pultron Composites, Hubei Yulong, Fusite, Fiberline, Marshall Composite Technologies, Sireg Geotech, Technobasalt, Kodiak Fiberglass Rebar, Captrad, Tribeni Fiber, B&B FRP Manufacturing Inc, Neuvokas Corporate, Mateenbar, Nycon, SFTec Inc, Nanjing Fenghui Composite, Yuxing, Shanghai KNP, etc. The global players competition landscape in this report is divided into three tiers.
