Research Summary

A composting toilet is an environmentally-friendly and sustainable alternative to traditional flush toilets that utilize water-based sewage systems. It is a self-contained system designed to efficiently decompose human waste and toilet paper into a nutrient-rich compost material through natural biological processes. The composting toilet typically consists of two chambers: one for collecting solid waste and toilet paper, and the other for the composting process. Microorganisms and bacteria present in the waste help break down organic matter, converting it into humus-like compost. These toilets are odorless, as they are well-ventilated to promote aerobic decomposition. Composting toilets are widely used in off-grid and eco-friendly settings, such as remote areas, cabins, boats, and sustainable buildings, as they minimize water usage, reduce pollution, and contribute to a more sustainable waste management approach.

The major global manufacturers of Composting Toilet include Separett, Nature's Head, Green Loo Pty Ltd, Sun-Mar, BioLet, TROBOLO, OGO Ltd, Clivus Multrum, Nature Loo, Biolan Oy, Eos Design LLC, Kazuba, Trelino, Simploo, NatSol, etc. The global players
