Research Summary

Compressor blades are crucial components in gas turbine engines and turbomachinery that are responsible for increasing the pressure of air or gas as it flows through the engine. These blades are aerodynamically designed to efficiently compress the air or gas and direct it towards the combustion chamber. In aircraft engines, compressor blades are part of the axial compressor, where they work in successive stages to progressively compress the incoming air. In industrial applications, they are used in centrifugal compressors and other types of compressors. Compressor blades are typically made of advanced materials such as titanium, steel, or high-temperature alloys to withstand the high rotational speeds and temperature conditions in which they operate. Proper design and maintenance of compressor blades are essential to ensure the optimal performance and reliability of the entire gas turbine engine or turbomachinery system.

The major global manufacturers of Compressor Blades include GKN Aerospace, Blades Technology, Chromalloy, Rolls Royce, Safran, C, Blade, Hi-Tek Manufacturing, Pacific
