Research Summary

A compressor-type car refrigerator is a portable refrigeration unit designed for use in vehicles, such as cars, trucks, RVs, and boats. It operates using a compressor system similar to that of a regular household refrigerator, which allows it to cool and maintain a consistent temperature inside the refrigerator compartment. The compressor compresses refrigerant gas, which then circulates through a condenser to dissipate heat and condense into a liquid. The cooled liquid refrigerant then flows through an expansion valve, where it expands and evaporates, absorbing heat from the refrigerator's interior, thereby cooling it. Compressor-type car refrigerators are known for their efficient cooling capabilities, ability to reach lower temperatures, and reliable performance even in hot outdoor conditions. They are commonly used during road trips, camping, and other outdoor activities to keep food, beverages, and medicines cool and fresh while on the move.

The major global manufacturers of Compressor Type Car Refrigerator include Dometic, IndelB, Sawafuji (Engel), PNDA, Yutong Electric Appliance, Colku, ARB, NFA, Evakool,
