### Research Summary

Computer-aided translation (CAT) software is a specialized tool designed to assist human translators in the process of translating written content from one language to another. CAT software utilizes advanced algorithms and databases to store previously translated segments, called translation memory, which can be reused in future translations to ensure consistency and accuracy. It also includes features like terminology management, glossaries, and context analysis, helping translators maintain the correct terminology and context throughout the translation process. CAT tools enhance translator productivity, improve translation quality, and reduce the time and effort required to complete translation projects. They are widely used in various industries, including localization, content creation, and global communication, where multilingual content is essential. CAT software does not replace human translators but rather empowers them by speeding up the translation process and maintaining the integrity of the translated content.

The major global suppliers of Computer-aided Translation Software include RWS Group, Across, Star Transit, Smartcat, TransPerfect, Lionbridge, LanguageWire, XTM Cloud, MemoQ, Memsource, UEDRIVE, Wordfast, Heartsome, D?j?
