Research Summary

Concrete cutting refers to the process of making precise and controlled cuts in concrete structures using specialized equipment and techniques. It is commonly done to create openings for windows, doors, vents, and utility access in existing concrete walls, floors, or ceilings. Concrete cutting can also be used to remove or modify sections of concrete that are damaged or no longer needed. The most common methods of concrete cutting include diamond sawing, which uses diamond-tipped blades to cut through the dense material efficiently, and concrete core drilling, which involves creating round holes in concrete surfaces for various purposes. Concrete cutting is a vital service in the construction and renovation industries, allowing for accurate modifications and alterations to concrete structures while minimizing disruption and ensuring structural integrity.

The major global manufacturers of Concrete Cutting include Hilti, Husqvarna, Cedima, Tyrolit, CEDIMA, Braun Maschinenfabrik, Demco Technic AG, Team-D, etc. The global players competition landscape in this report is divided into three tiers.
