Research Summary

A concrete expansion joint is a purposeful gap or space intentionally placed in concrete structures to accommodate the natural expansion and contraction that occurs due to temperature changes, moisture variations, or other factors. These joints prevent cracking and structural damage by allowing the concrete to expand and contract without generating stress that could lead to fissures or deformations. Concrete expansion joints are typically filled with materials like flexible sealants or rubber compounds to ensure a watertight seal while still permitting movement. They are commonly found in various concrete structures such as sidewalks, bridges, highways, parking lots, and building foundations, where they play a crucial role in maintaining the structural integrity and longevity of the concrete elements.

The major global manufacturers of Concrete Expansion Joint include GCP Applied Technologies, Watson Bowman Acme, EMSEAL Joint Systems, MM Systems, W. R. Meadows, LymTal International, DS Brown, ITW Construction Systems, Nystrom, RJ Watson, Connolly Key Joint, Amorim, WE Cork, Megacork, Roaby, ZKHY, etc. The
