### Research Summary

Concrete fiber, also known as fiber-reinforced concrete, is a composite material composed of cement, fine aggregates, coarse aggregates, and discrete fibers. The addition of fibers, typically made of materials such as steel, glass, synthetic, or natural fibers, enhances the mechanical properties and performance of the concrete. These fibers help to improve the concrete's tensile strength, ductility, toughness, and crack resistance, making it more durable and resistant to cracking and spalling. Concrete fiber is commonly used in various construction applications, such as pavements, bridges, industrial floors, precast elements, and shotcrete, where the demands for structural integrity and durability are high. The incorporation of fibers into concrete allows for better control of cracking and improved structural performance, resulting in longer-lasting and more reliable concrete structures.

The major global manufacturers of Concrete Fiber include Bekaert SA, Euclid Chemical, Nycon, Sika Corporation, Propex, BASF, Fibercon International, Grace, Fabpro, Chircu Prod -Impex, BAUTECH, Elasto Plastic Concrete (EPC), FORTA, Hunan Sunshine
