Research Summary

Concrete waterproofing admixture is a specialized chemical additive used in concrete mixtures to enhance its resistance to water penetration and prevent water-related damage. When added to the concrete during mixing, this admixture forms a waterproof barrier within the concrete matrix, reducing its permeability and making it impermeable to water and moisture. It works by filling the capillaries and pores in the concrete, effectively blocking the passage of water. Concrete waterproofing admixtures help protect concrete structures from water seepage, dampness, and potential issues like corrosion of embedded steel reinforcement or deterioration due to freeze-thaw cycles. They are commonly used in various construction projects, such as basements, foundations, swimming pools, tunnels, and retaining walls, to ensure long-lasting and durable concrete structures with superior water resistance properties.

The major global manufacturers of Concrete Waterproofing Admixture include Kryton, Xypex Chemical, Fosroc, GCP Applied Technologies Inc, Hycrete, SIKA, BASF,
