Research Summary

Conductive cloth, also known as conductive fabric, is a textile material infused with conductive elements, such as metal fibers or nanoparticles, that allow it to conduct electricity. This unique property makes conductive cloth suitable for various applications in electronics, wearable technology, and electromagnetic shielding. It is often used to create flexible and stretchable circuits, touch-sensitive interfaces, and wearable electronic devices like smart clothing, gloves, and medical sensors. Conductive cloth is also utilized in industries where electromagnetic interference (EMI) shielding is required, such as aerospace and military applications.
