Research Summary

Conductive die attach film (CDAF) is a specialized adhesive used in the semiconductor industry to securely attach integrated circuit (IC) chips to substrates while ensuring electrical conductivity and thermal management. This film is composed of a polymer matrix filled with conductive particles, typically silver, which provides both mechanical bonding and efficient electrical connection between the die and the substrate. CDAF offers advantages over traditional die attach pastes, including uniform thickness, reduced voids, and simplified processing, leading to improved reliability and performance of electronic devices. Its application is critical in high-frequency and high-power electronic components, where maintaining electrical and thermal pathways is essential for device efficiency and longevity.

The major global manufacturers of Conductive Die Attach Film include Nitto, Henkel, Furukawa Electric, AI Technology, Creative Materials, NedCard, Integra Technologies, Hitachi Chemical, NAMICS, Wafsem Technology, Alpha Advanced Materials, Protavic, etc. The global players competition landscape in this report is divided into three tiers.
