### Research Summary

Conductive flooring, also known as ESD (electrostatic discharge) flooring, is a specialized type of flooring designed to dissipate static electricity safely and efficiently. It is commonly used in environments where electrostatic discharge could damage sensitive electronic equipment or pose a risk to human safety. Conductive flooring is made with materials that have a low electrical resistance, allowing static charges to flow through the floor and be grounded safely. This prevents the accumulation of static electricity, reducing the risk of sparks, fires, and damage to electronic components. Conductive flooring is widely used in industries like electronics manufacturing, data centers, laboratories, and cleanrooms, where static-sensitive materials and equipment are handled. It offers a reliable solution for mitigating the risks associated with electrostatic discharge, ensuring a safe and controlled environment for both workers and equipment.

The major global manufacturers of Conductive Flooring include Gerflor, Asia Cuanon, Sika, Staticworx, Julie Industries, Ecotile, Forbo, Nora Flooring, Tarkett, Armstrong
