Research Summary

Construction nails are essential fasteners used in the building and construction industry to join materials together securely. These nails are typically made from steel, which provides strength and durability to withstand various construction applications. They come in different types, including common nails, box nails, finishing nails, and roofing nails, each designed for specific tasks. Common nails are the most versatile and widely used, suitable for general construction and framing applications. Box nails have thinner shanks and are ideal for assembling lighter materials such as siding and trim. Finishing nails are smaller and have a more delicate appearance, making them suitable for finish carpentry work. Roofing nails have a large head and are specifically used to secure roofing materials.
