Research Summary

Contact adhesives are a type of adhesive that provides strong and instant bond when two surfaces come into contact with each other. They are designed to adhere to a wide range of materials, including wood, metal, plastic, rubber, and more. Contact adhesives are typically applied to both surfaces that need to be bonded, and once the adhesive dries, the surfaces are pressed together to create a strong and permanent bond. These adhesives offer high initial tack, which allows for immediate holding power and eliminates the need for clamping or other mechanical fastening methods. They are widely used in various industries, including woodworking, automotive, footwear, and construction, due to their versatility and ability to bond a wide variety of materials. However, contact adhesives should be used in well-ventilated areas, as they often contain volatile organic compounds (VOCs) that can emit strong odors during application and drying.

The major global manufacturers of Contact Adhesives include Henkel, H.B. FULLER, 3M, ROYAL ADHESIVES & SEALANTS, Eastman Chemical, ITW, Sika, Bison,
