Research Summary

A Contact Image Sensor (CIS) is a type of image-capturing technology commonly used in scanners and other imaging devices. Unlike traditional scanners that use a moving light source and mirrors to scan images, CIS utilizes a linear array of light-sensitive sensors positioned in direct contact with the document or object being scanned. When the document is passed over the CIS, the sensors capture the reflected light to create a digital image. CIS technology offers several advantages, including compact design, low power consumption, and faster scanning speeds compared to traditional scanners. It is widely used in portable and desktop scanners, as well as in multifunction printers and other devices that require efficient and reliable image capture capabilities.

The major global manufacturers of Contact Image Sensor include Mitsubishi Electric, Canon, ROHM Semiconductor, ON Semiconductor, Syscan, Lite-On Semiconductor, WHEC, Tichawa Vision, CMOS Sensor Inc., etc. The global players competition landscape in this report is divided into three tiers. The first tier comprises global leading enterprises that command a substantial market share, hold a dominant industry

position, possess strong competitiveness and influence, and generate significant revenue. The second tier includes companies with a notable market presence and reputation; these firms actively follow industry leaders in product, service, or technological innovation and maintain a moderate revenue scale. The third tier consists of smaller companies with limited market share and lower brand recognition, primarily focused on local markets and generating comparatively lower revenue.
