Research Summary

Contact lenses are thin, transparent, and curved discs made of various materials, designed to be placed directly on the surface of the eye to correct vision problems or for cosmetic purposes. They serve as an alternative to traditional eyeglasses and provide a more natural and unobstructed field of view. Contact lenses come in different types, such as soft lenses, rigid gas-permeable lenses, and specialized lenses for specific eye conditions. They work by refracting light directly onto the retina, compensating for refractive errors like nearsightedness, farsightedness, astigmatism, and presbyopia. While some contact lenses are intended for daily disposable use, others can be replaced monthly or even worn for extended periods. Proper care, hygiene, and adherence to the prescribed wearing schedule are essential for maintaining eye health and getting the best vision correction results from contact lenses.
