Research Summary

Container liners, also known as bulk container liners or shipping container liners, are large, flexible bags or liners specifically designed to fit inside standard-sized shipping containers. They serve as an efficient and hygienic solution for transporting and protecting dry bulk materials, such as powders, granules, or liquids, in bulk quantities. Container liners are typically made from high-quality materials like polyethylene or polypropylene, which are food-grade and suitable for various industries, including agriculture, chemicals, and food processing. To use a container liner, it is placed inside the container, and then the bulk material is loaded into the liner. Once filled, the liner is sealed to prevent spillage and contamination during transportation. Container liners facilitate easy loading and unloading of bulk goods, reduce the need for additional packaging, and protect the cargo from moisture, dust, and external elements, ensuring safe and efficient transport of bulk commodities across long distances.

The major global manufacturers of Container Liners include Taihua, Greif Flexible Products & Services, Linertech, Caretex, Louis Blockx, Anthente, Norseman, LC
