### Research Summary

Continuous carbon fiber reinforced thermoplastic composites, often referred to as continuous carbon fiber composites or CFRTP, are advanced materials that combine continuous carbon fibers with a thermoplastic polymer matrix. The continuous carbon fibers provide exceptional strength, stiffness, and lightweight properties, while the thermoplastic matrix offers excellent impact resistance, chemical resistance, and recyclability. The manufacturing process involves impregnating the continuous carbon fibers with the thermoplastic resin, followed by consolidation and shaping using techniques such as compression molding or automated fiber placement. CFRTP composites are widely used in aerospace, automotive, sports equipment, and other industries where high-performance materials with low weight are essential. These composites offer advantages like higher strength-to-weight ratios compared to traditional materials, making them valuable for lightweight structures, reducing fuel consumption, and enhancing overall product performance. Moreover, their ability to be

reheated and reshaped facilitates repair and recycling, making them a sustainable and eco-friendly solution in engineering applications.

The major global manufacturers of Continuous Carbon Fiber Reinforced Thermoplastic Composites include Toray, Solvay, Evonik Industries, Teijin, Covestro, Victrex, Mitsui Chemicals, Lanxess, etc. The global players competition landscape in this report is divided into three tiers.
