Research Summary

Continuous form paper, also known as continuous stationery or continuous feed paper, is a type of paper used mainly for printing large volumes of data in a continuous, uninterrupted manner. It comes in a roll form, typically with pre-punched holes along the sides that allow it to be fed into a dot matrix or line printer equipped with a tractor feed mechanism. The paper is perforated at regular intervals, making it easy to tear off individual sheets after printing. Continuous form paper is commonly used in settings where bulk printing and data processing are required, such as in offices, data centers, and industrial environments. It is especially well-suited for applications like printing invoices, reports, order forms, and other high-volume documents. Despite being less common in modern office settings due to advancements in digital printing, continuous form paper continues to be a reliable and cost-effective solution for certain specialized printing needs.

The major global manufacturers of Continuous Form Paper include Domtar, ATec Print, KOKUYO, PLUS Corporation, Tjiwi Kimia, Trison, YI-YI-CHENG, Bestec Digital, Yulu
