Research Summary

Continuous level measurement is a method used to monitor and track the level of liquid or solid materials in storage tanks, silos, or other containers without interruption. It involves the use of various sensors and instruments, such as ultrasonic, radar, capacitance, or hydrostatic level sensors, which continuously measure the distance between the sensor and the surface of the material. The sensors transmit this data to a monitoring system or display, allowing operators to have real-time visibility of the material's level. Continuous level measurement is essential in industries like oil and gas, chemical, food and beverage, and water treatment, where accurate and reliable level data is crucial for inventory management, process control, and preventing overflows or shortages. This measurement approach ensures a constant and updated view of the material level, enabling proactive decision-making and optimal utilization of storage capacity.

The major global manufacturers of Continuous Level Measurement include ABB, E+H, Emerson Electric, Siemens AG, VEGA, KROHNE, Honeywell, Magnetrol International,

Schneider Electric, Yokogawa Electric, SICK, Christian Burkert, Dandong Top Electronics Instrument, Berthold Technologies, BinMaster, OMEGA Engineering, Madison, Matsushima Measure, GAMICOS, Valeport, etc. The global players competition landscape in this report is divided into three tiers.
