Research Summary

Continuous Positive Airway Pressure (CPAP) devices are medical devices used to treat sleep apnea, a sleep disorder characterized by interrupted breathing during sleep. The CPAP device delivers a continuous flow of air through a mask that covers the nose and/or mouth of the patient. The pressurized air helps to keep the airway open, preventing obstructions and allowing the individual to breathe regularly during sleep. CPAP therapy effectively reduces snoring, improves oxygen levels, and promotes uninterrupted sleep, alleviating the symptoms and health risks associated with sleep apnea. CPAP devices come in various models and configurations, including fixed pressure and auto-adjusting (APAP) models, catering to the individual needs and comfort of the patient. Properly prescribed and used, CPAP devices significantly improve the quality of sleep and overall well-being of individuals affected by sleep apnea.
