Research Summary

A Continuous Positive Pressure Respirator (CPPR) is a type of respiratory protective device that delivers a constant flow of air or oxygen to the wearer's airways to maintain positive pressure throughout the breathing cycle. Unlike traditional respirators that rely on negative pressure to pull air into the mask, CPPRs actively push air into the mask or hood, creating a higher pressure environment inside. This positive pressure helps ensure that the wearer breathes in a steady supply of clean air, reducing the risk of inhaling contaminants or airborne particles. CPPRs are commonly used in environments where there is a high risk of exposure to hazardous substances, such as in healthcare settings during infectious disease outbreaks, in industrial settings with airborne pollutants, or in firefighting operations where smoke and toxic gases are present. They provide reliable respiratory protection for workers by preventing the ingress of harmful substances into the respiratory system.

The major global manufacturers of Continuous Positive Pressure Respirator include

ResMed, Intersurgical, Air Liquide Medical Systems, Philips, Apex Medical, Fisher & Paykel Healthcare, BMC Medical, Vyaire Medical, Dräger, DeVilbiss Healthcare, Hamilton Medical, Sleepnet, etc. The global players competition landscape in this report is divided into three tiers.
