### Research Summary

A cooling fan is an electronic device used to dissipate heat and maintain optimal operating temperatures in various electronic and mechanical systems. It typically consists of a motor-driven fan blade housed within a protective casing. Cooling fans work by drawing in air and directing it over heat-generating components or surfaces, such as computer processors, graphics cards, power supplies, or machinery. As the air passes over these components, it absorbs heat, which is then expelled away from the system, effectively cooling the components. The continuous airflow provided by cooling fans prevents overheating, ensures efficient performance, and prolongs the lifespan of electronic devices and mechanical equipment. Cooling fans are used in various applications, from personal computers and gaming consoles to industrial machines and automotive cooling systems, playing a vital role in maintaining optimal operating conditions and preventing thermal damage.

The major global manufacturers of Cooling Fan include Ebm-papst, Delta Group, ZIEHL Abegg, NMB, SUNON, Nidec Corporation, Sanyo Denki, Aerovent, Horton, SPAL Automotive, DENSO, AVC, ADDA, AMETEK.Inc, Rosenberg, Multi-Wing America, etc.
