### Research Summary

Copper Chromated Arsenic (CCA) is a wood preservative that has been historically used to protect timber from decay, insects, and fungal growth. It is a mixture of copper, chromium, and arsenic compounds that are pressure-treated into wood to extend its service life and increase its resistance to environmental deterioration. The copper in CCA provides protection against fungi and bacteria, while the chromium and arsenic enhance the wood's resistance to insects and termites. CCA-treated wood has been widely used in outdoor applications such as decks, fences, playground equipment, and utility poles. However, due to environmental and health concerns regarding the release of arsenic into the environment, the use of CCA has significantly decreased in recent years. Many countries have banned or restricted its use in certain applications, and alternatives like ACQ (Alkaline Copper Quaternary) and CA (Copper Azole) are being used as more environmentally friendly wood preservatives.

The major global manufacturers of Copper Chromated Arsenic include Lonza, Koppers, Viance, Dolphin Bay, Goodfellow, Jinan Delan Chemicals, CRM Yingtan, Foshan Liyuan
