### Research Summary

Copper coaxial cable is a type of electrical cable widely used for transmitting high-frequency signals and data. It consists of a central copper conductor surrounded by a dielectric insulator, which is further encased in a copper braid shield and an outer jacket. The central conductor carries the signal, while the dielectric material provides insulation and maintains the signal integrity. The copper braid shield protects the cable from external electromagnetic interference, and the outer jacket provides mechanical protection and insulation. Copper coaxial cables are commonly used in various applications, including cable television (CATV), internet (broadband), telecommunications, CCTV systems, and radio frequency (RF) communications. They are preferred for their excellent signal transmission, low attenuation, and ability to withstand high-frequency signals without significant loss, making them suitable for high-speed data transmission and long-distance communication.

The major global manufacturers of Copper Coaxial Cable include TE Connectivity, General Cable, Belden, Amphenol, Coleman Cable, LS Cable & System, Nexans,

Southwire, etc. The global players competition landscape in this report is divided into three tiers.
