Research Summary

Copper paste is a specialized form of paste or adhesive that contains finely dispersed copper particles suspended in a carrier medium. It is commonly used in electronics, particularly for the assembly and bonding of electronic components. The paste's copper content provides electrical conductivity, allowing it to create conductive paths or connections on printed circuit boards (PCBs) or other electronic devices. Copper paste is often used for applications like circuit board repair, trace repairs, and grounding connections. It is also utilized for attaching components like LEDs, resistors, and integrated circuits to the PCB during assembly. The paste is typically applied using stencil printing or dispensing techniques, and it undergoes a curing or drying process to achieve the desired bond strength and conductivity. Copper paste plays a critical role in modern electronics manufacturing, enabling the creation of reliable and efficient electronic circuits and devices.

The major global manufacturers of Copper Paste include Shoei Chemical, Sumitomo Metal Mining, TDK electronics(EPCOS), Kyoto Elex, Tatsuta, Chang Sung Corporation, Fenghua Advanced Technology, Amplettec, NAMICS, Mitsuboshi Belting, Heraeus,
