Research Summary

Copper-plated steel strip is a composite material consisting of a steel strip with a thin layer of copper electroplated onto its surface. The electroplating process involves immersing the steel strip in an electrolyte solution and passing an electric current through it, causing copper ions in the solution to be deposited onto the steel surface, forming a uniform copper layer. The copper plating provides the steel strip with the desirable properties of both materials. The steel core offers strength, durability, and magnetic properties, while the copper coating offers excellent electrical conductivity, corrosion resistance, and a visually appealing appearance. Copper-plated steel strip finds applications in various industries, including electronics, automotive, telecommunications, and construction. It is commonly used in electrical connectors, switches, terminals, and shielding materials where both electrical performance and mechanical strength are crucial. The combination of steel and copper in this composite material allows for cost-effective solutions that meet diverse engineering requirements.

The major global manufacturers of Copper-plated Steel Strip include ?ELEZ?RNY Velk?
