### Research Summary

Copper scrap refers to discarded or waste copper materials that can be recycled and reused in various industries. It includes various forms of copper, such as copper wire, copper pipes, copper sheets, and other copper-containing products that have reached the end of their useful life or are no longer needed. Copper scrap can be obtained from various sources, including industrial processes, construction and demolition sites, electronic waste, and automotive components. Recycling copper scrap is economically and environmentally beneficial as it reduces the need for mining new copper ore, conserves natural resources, and minimizes energy consumption and greenhouse gas emissions associated with copper production. After collection and processing, copper scrap is melted and refined to obtain pure copper, which can then be used to produce new copper products or incorporated into the manufacturing of various goods. The recycling of copper scrap is an essential part of the circular economy, promoting sustainability and responsible resource management.

The major global manufacturers of Copper Scrap include Aurubis, Commercial

Metals(CMC), SIMS Metal Management, European Metal Recycling (EMR), HKS Metals, Jansen Recycling Group, Kuusakoski, Mallin Companies, Wieland Group, OmniSource Corporation, Reukema, David J.
