Research Summary

Coral calcium is a dietary supplement derived from the limestone-like skeletal remains of coral reefs, primarily from marine coral species. It is touted for its high content of calcium and other essential minerals, including magnesium and trace minerals. Proponents claim that coral calcium offers superior bioavailability and can help promote bone health, support the immune system, and maintain proper pH balance in the body. However, scientific evidence supporting these claims is limited, and coral calcium is not considered a superior source of calcium compared to other calcium supplements derived from natural sources like oyster shells or from synthesized forms. Additionally, there are concerns about the environmental impact of harvesting coral reefs for dietary supplements. As with any supplement, it is essential to consult with a healthcare professional before considering coral calcium to ensure it is suitable for individual health needs.

The major global manufacturers of Coral Calcium include GNC, Now Foods, Coral LLC, Marine Bio, Natural Biology, Brazil Live Coral, CFU Distribution, Nature's Way,
