Research Summary

Cored wire, also known as flux-cored wire, is a type of welding consumable used in various welding processes, including gas metal arc welding (GMAW) and submerged arc welding (SAW). It consists of a metal sheath filled with a powdered flux or other materials that aid in the welding process. The cored wire is fed through the welding torch or gun, and as the wire melts, the flux inside creates a shielding gas to protect the weld pool from atmospheric contamination. The flux may also contain additional alloying elements that improve the mechanical properties and performance of the weld. Cored wire offers several advantages over solid wire, including increased deposition rates, better weld bead penetration, and improved weld quality, especially in challenging welding applications. It is commonly used in industries such as automotive, construction, and shipbuilding, where high-quality and efficient welding is required.

The major global manufacturers of Cored Wire include Sarthak Metals, Anyang Chunyang, Anyang Tiefa, Anyang Wanhua, Henan Xibao, Harbin KeDeWei, Anyang Changxin Special Alloy, Wuxi Novel Special Metal, TUF Group, FSM, OFZ, McKeown, etc. The global players competition landscape in this report is divided into three tiers.
