Notably, the China Coreless DC Motors market has changed rapidly in the past few years. By 2025, China's market size is expected to be Million USD, representing approximately % of the global market share.

Research Summary

Coreless DC motors are a type of direct current (DC) electric motors that feature a unique construction without an iron core in their rotor. Unlike traditional DC motors that have a laminated iron core, coreless DC motors have a winding wound around a lightweight, non-magnetic, and hollow cylindrical rotor. This design eliminates the iron core's mass and reduces inertia, allowing the rotor to accelerate and decelerate rapidly. Coreless DC motors are known for their high power-to-weight ratio, making them ideal for applications requiring rapid acceleration and precise control, such as in aerospace, robotics, and medical devices. They also offer low cogging and minimal electrical resistance, resulting in smooth and efficient operation. Due to their lightweight and compact design, coreless DC motors are suitable for portable and miniaturized devices, where space and weight constraints are critical considerations.

The major global manufacturers of Coreless DC Motors include Faulhaber, Portescap, Allied Motion Technologies, Maxon Motor, Nidec Copal Corporation, Adamant Namiki Precision Jewel, C.I. TAKIRON, Constar Micromotor, Topband, MOONS', Once Top
