Research Summary

Cork stoppers are cylindrical closures made from natural cork, derived from the bark of the cork oak tree (*Quercus suber*). These stoppers are used to seal bottles, particularly wine bottles, to preserve the contents and prevent air from entering, which could affect the quality and flavor of the liquid. Cork stoppers have been used for centuries due to their unique properties, including elasticity and compressibility, which allow them to create a secure and airtight seal. The structure of cork is composed of tiny air-filled cells, providing resilience and impermeability to liquids and gases. Cork stoppers are widely preferred in the wine industry for their ability to allow a controlled amount of oxygen to interact with the wine over time, resulting in a slow and beneficial aging process. Additionally, cork stoppers are sustainable and environmentally friendly, as the cork oak tree's bark can be harvested repeatedly without damaging the tree, making them an ideal choice for packaging solutions in the beverage industry.
