Research Summary

Corrosion-resistant rebar, also known as stainless steel rebar or epoxy-coated rebar, is a type of reinforcing steel used in concrete construction to enhance the durability and longevity of concrete structures in corrosive environments. Unlike traditional carbon steel rebar, which is susceptible to corrosion when exposed to moisture and aggressive chemicals, corrosion-resistant rebar is made from stainless steel or coated with an epoxy layer to protect it from rust and deterioration. This type of rebar is commonly used in infrastructure projects such as bridges, marine structures, parking garages, and buildings located in coastal areas or environments with high humidity and exposure to chloride ions. Corrosion-resistant rebar helps prevent the development of cracks, spalling, and structural damage caused by corrosion, ensuring the integrity and safety of the concrete structure over its service life.

The major global manufacturers of Corrosion Resistant Rebar include Commercial Metals Company, Nucor, Guangxi Shenglong Metallurgical, Fusteel, EVRAZ, Baowu Group, Yancheng Lianxin Iron & Steel, Sanbao Steel, Mechel, Tata Steel, Q-Coat,
