Research Summary

Corrugated aluminum sheath cable is a type of electrical cable designed for outdoor or underground applications where protection against moisture and environmental factors is essential. The cable consists of a core conductor, usually made of copper or aluminum, surrounded by a corrugated aluminum sheath. The corrugated design of the aluminum sheath provides added flexibility and strength to the cable, making it suitable for installation in challenging terrains or areas where bending or twisting is required. The corrugated aluminum sheath also acts as a protective barrier, shielding the core conductor from moisture, water, and other external elements that could potentially damage the cable. Corrugated aluminum sheath cables are commonly used in power transmission and distribution systems, telecommunications, and industrial applications, where reliability and durability are crucial for long-term performance.

The major global manufacturers of Corrugated Aluminum Sheath Cable include Prysmian Group, LS Cable & System, Sumitomo Electric, Southwire, Nexans, Furukawa
