### Research Summary

A cortical electrode, also known as an intracranial electrode or brain electrode, is a specialized medical device used in neuroscience and neurosurgery to directly record or stimulate brain activity. These electrodes are designed to be placed directly on the surface of the cerebral cortex or inserted into specific regions of the brain to monitor neural signals or deliver electrical stimulation. Cortical electrodes are often used in research and clinical settings to study brain function, understand neural networks, and map brain activity related to various cognitive and motor functions. In clinical applications, they can be used to diagnose and treat neurological disorders such as epilepsy or Parkinson's disease by precisely targeting and modulating specific brain regions. The use of cortical electrodes requires skilled medical professionals and is considered an invasive procedure, but it provides valuable insights into brain function and offers potential therapeutic benefits in the field of neurology and neuroscience.

The major global manufacturers of Cortical Electrode include AD-TECH Medical, PMT Corporation, Sinovation, Integra Life, DIXI Medical, Unique Medical, etc. The global
