### Research Summary

Cosmeceuticals are a category of cosmetic products that bridge the gap between cosmetics and pharmaceuticals. These products contain biologically active ingredients that are intended to provide additional skincare benefits beyond the traditional cosmetic function of enhancing appearance. Cosmeceuticals typically contain ingredients such as vitamins, peptides, antioxidants, botanical extracts, and growth factors that have been scientifically proven to have beneficial effects on the skin. They are formulated to target specific skin concerns, such as wrinkles, fine lines, hyperpigmentation, acne, and skin aging. Unlike pharmaceutical drugs, cosmeceuticals are not subject to rigorous regulatory scrutiny and do not require prescription.
