Research Summary

Cosmetic grade fullerene refers to a form of fullerene, specifically C60 fullerene, which is used in cosmetic products for its potential skincare benefits. Fullerene is a molecule composed entirely of carbon, typically arranged in a hollow sphere, ellipsoid, or tube shape. In cosmetic formulations, fullerene is valued for its antioxidant properties, which can help neutralize free radicals and protect the skin from oxidative stress. Cosmetic grade fullerene is often incorporated into skincare products such as creams, serums, and masks, where it is believed to contribute to anti-aging effects by reducing the appearance of wrinkles, fine lines, and age spots. Additionally, fullerene may help improve skin hydration and elasticity. Cosmetic grade fullerene is typically produced through purification processes to ensure its safety and effectiveness for use on the skin.

The major global manufacturers of Cosmetic Grade Fullerene include VC60, Nano-C, Frontier Carbon Corporation, Xiamen Funa New Materials, Zhongke Times Nano, Suzhou Dade Carbon Nanotechnology, etc. The global players competition landscape in this report is divided into three tiers.
