Research Summary

CPAP (Continuous Positive Airway Pressure) devices are medical devices used to treat sleep apnea, a sleep disorder characterized by brief interruptions in breathing during sleep. CPAP devices deliver a constant flow of air pressure through a mask that covers the nose and sometimes the mouth, keeping the airway open and preventing it from collapsing or narrowing. This continuous flow of pressurized air ensures that the individual can breathe normally and helps maintain proper oxygen levels during sleep. CPAP therapy is a non-invasive and highly effective treatment for obstructive sleep apnea, reducing symptoms like snoring, daytime sleepiness, and fatigue. The pressure settings on the CPAP machine are personalized based on the individual's sleep study results and specific needs. CPAP devices have significantly improved the quality of life for many individuals with sleep apnea, allowing for better sleep and overall health outcomes.

The major global manufacturers of CPAP Devices include ResMed, Philips Respironics, Fisher & Paykel Healthcare, DeVilbiss Healthcare, Fosun Pharma, Covidien
