### Research Summary

CPAP (Continuous Positive Airway Pressure) ventilators are medical devices used to support patients with breathing difficulties, particularly those with sleep apnea, respiratory disorders, or lung conditions. CPAP ventilators deliver a continuous flow of pressurized air to the airway through a mask, maintaining positive pressure to keep the airway open and prevent collapse during inhalation and exhalation. This constant pressure helps improve lung function and oxygen levels, ensuring adequate ventilation and oxygenation during sleep or while awake. CPAP ventilators are different from traditional ventilators used in intensive care units, as they do not provide mechanical breaths but rather assist the patient's natural breathing process. They are widely used in the treatment of obstructive sleep apnea and other respiratory disorders, providing relief from symptoms like snoring, daytime fatigue, and interrupted breathing, ultimately leading to improved sleep quality and overall well-being.

The major global manufacturers of CPAP Ventilators include ResMed, Philips Respironics, Fisher & Paykel Healthcare, DeVilbiss Healthcare, Breas, Apex,

Weinmann, Teijin Pharma, Curative Medical, Covidien(Medtronic), Koike Medical, Somnetics International, Nidek Medical India, BMC Medical, SLS Medical Technology, Beijing Kangdu Medical, Changcha Beyond Medical, etc. The global players competition landscape in this report is divided into three tiers.
