Research Summary

CPP (Cast Polypropylene) packaging films are a type of flexible packaging material made from polypropylene resins through a casting process. These films are known for their excellent clarity, high tensile strength, and good barrier properties against moisture, gases, and odors. CPP packaging films are commonly used for a wide range of applications, including food packaging, pharmaceutical packaging, and various consumer products. They are often used as lamination layers in multilayer flexible packaging structures to enhance the overall performance and durability of the packaging. CPP films offer versatility, providing options for various thicknesses, seal strengths, and surface finishes to meet specific packaging requirements.
