Research Summary

CRA (Corrosion-Resistant Alloy) clad and lined pipe is a specialized type of pipe used in industries such as oil and gas, chemical processing, and power generation, where corrosion resistance is paramount. These pipes consist of a base material, typically carbon or low-alloy steel, which is overlaid with a layer of corrosion-resistant alloy such as stainless steel, nickel alloys, or titanium. In CRA clad pipes, the corrosion-resistant alloy is bonded to the base material through methods like explosion bonding or weld overlaying, providing excellent corrosion resistance on both inner and outer surfaces while retaining the mechanical properties of the base material. In contrast, CRA lined pipes feature a thin corrosion-resistant alloy liner applied to the internal surface of the pipe, acting as a barrier against corrosive fluids. CRA clad and lined pipes offer superior corrosion resistance, extended service life, and reliability in harsh operating conditions, making them essential for critical applications where conventional steel pipes may fail prematurely due to corrosion.

The major global manufacturers of CRA Clad and Lined Pipe include Butting Group,

The Japan Steel Works (JSW), NobelClad, Proclad, Inox Tech, Gieminox, Eisenbau Kramer (EBK), Cladtek Holdings, EEW Group, Canadoil Group, Xinxing Ductile, Jiangsu New Sunshine, Zhejiang Jiuli Group, Xian Sunward Aeromat, Jiangsu Shunlong, Jiangsu Zhongxin, etc. The global players competition landscape in this report is divided into three tiers.
