Research Summary

Crane wheels are specialized wheels used in overhead cranes and other heavy-duty material handling equipment to enable smooth movement along crane rails or tracks. These wheels are designed to bear the weight of the crane and the load it carries, distributing the load evenly across the rail and minimizing wear and tear. Crane wheels are typically made from high-strength materials, such as forged steel or cast iron, to withstand the heavy loads and harsh operating conditions. They are often mounted on axles and equipped with ball or roller bearings to reduce friction and facilitate effortless movement. Properly selected and maintained crane wheels are crucial for the safe and efficient operation of overhead cranes, ensuring that the wheels run smoothly along the crane rails, reducing rolling resistance, and enabling precise and controlled material handling in industrial environments.

The major global manufacturers of Crane Wheels include Xtek, McKees Rocks Forgings, KARL GEORG, Irwin Car and Equipment, SIBRE, DGCRANE, Downs Crane & Hoist, Hydramach Overhead Crane, Henan Zoke Crane, Cheng Day International
