Research Summary

Cross docking is a logistics strategy where incoming goods from suppliers are directly transferred to outbound transportation with minimal or no storage time in between. A cross docking solution refers to the infrastructure, processes, and technologies designed to facilitate this efficient transfer of goods. It involves strategically located facilities equipped with docking stations, sorting equipment, and sometimes automated systems to streamline the movement of goods. The goal of cross docking is to reduce inventory holding times, minimize handling costs, and speed up the delivery process to customers.
