Research Summary

Cross Laminated Timber (CLT) is an innovative and sustainable building material that has gained popularity in the construction industry. It is a type of engineered wood product made by layering multiple boards of lumber in alternating directions and then bonding them together with strong adhesives. The cross lamination gives CLT its exceptional strength, stability, and dimensional rigidity, making it comparable to traditional construction materials like concrete and steel. CLT panels are prefabricated in controlled factory environments and can be custom-made to various sizes and shapes. These panels are used for walls, floors, and roofs in residential, commercial, and industrial buildings. CLT offers numerous benefits, including reduced construction time, lower environmental impact due to its renewable and sustainable nature, and improved thermal and acoustic properties. Its use in construction promotes timber as a viable alternative to conventional materials and contributes to the growing trend of sustainable and eco-friendly building practices.

The major global manufacturers of Cross Laminated Timber (CLT) include Stora Enso,

Binderholz, KLH Massivholz, Mayr-Melnhof Holz, MHM Abbund-Zentrum, Hasslacher Norica, Lignotrend, Z?BLIN Timber Construction, Eugen Decker, XLam Dolomiti, W. u. J.
