Research Summary

Cross-linked polyolefin foam is a type of closed-cell foam material that is chemically cross-linked to create a three-dimensional network structure within the polymer. This cross-linking process enhances the foam's mechanical properties, making it more durable, resilient, and resistant to deformation compared to non-cross-linked foams. Cross-linked polyolefin foam is lightweight, buoyant, and has excellent thermal insulation and sound absorption properties. It is commonly used in various industries and applications, such as automotive, construction, packaging, sports and leisure, and medical devices. The foam's closed-cell structure prevents the absorption of water, making it ideal for use in wet or humid environments. Cross-linked polyolefin foam is a versatile material that provides cushioning, protection, and insulation, making it a valuable choice for a wide range of applications requiring high-performance foam solutions.

The major global manufacturers of Cross Linked Polyolefin Foam include Armacell, Sekisui Chemical, BASF, Furukawa, Toray Plastics, W. K PP, Zotefoams, Zhejiang
