Research Summary

Crown moulding, also known as crown molding, is a decorative architectural feature used to enhance the appearance of interior spaces, particularly at the junction of walls and ceilings. It is typically made from wood, polyurethane, or other materials and comes in a variety of styles and sizes. Crown moulding is installed along the top edges of walls, where they meet the ceiling, creating an elegant transition and adding visual interest to rooms. It serves both aesthetic and practical purposes, as it can hide imperfections in the junctions and provide a finished, polished look to the interior design. Crown moulding has been used for centuries and is a timeless element of traditional and classical architectural styles, but it can also be incorporated into modern and contemporary designs to add character and charm to any space.
