Research Summary

A Cryogenic Submerged Electric Motor Pump is a specialized type of pump designed to handle and transfer cryogenic fluids, such as liquid nitrogen, liquid oxygen, or liquefied natural gas (LNG). This pump operates in extremely low-temperature environments, below -150 degrees Celsius (-238 degrees Fahrenheit), and is submerged directly in the cryogenic fluid for efficient and reliable performance. The electric motor of the pump is specially designed to withstand the extreme cold and operate safely in cryogenic conditions. The submerged configuration ensures that the pump is constantly surrounded by the cryogenic fluid, preventing overheating and maintaining the required low temperatures during the pumping process. Cryogenic submerged electric motor pumps are essential components in various industrial applications, including cryogenic storage, liquefaction, and transportation of cryogenic fluids, providing a dependable and efficient solution for handling these extremely cold materials.

The major global manufacturers of Cryogenic Submerged Electric Motor Pump include
