Research Summary

Cryogenics liquid hydrogen storage involves maintaining hydrogen in its liquid state at extremely low temperatures, specifically below -252.87°C (-423.17°F). This method of storage is crucial for various applications, including space exploration, where liquid hydrogen is used as rocket fuel, and in emerging energy technologies like hydrogen fuel cells for transportation and power generation. Storing hydrogen as a liquid provides a high energy density compared to its gaseous form, making it more efficient for storage and transport. Cryogenic storage tanks for liquid hydrogen are designed with advanced insulation materials and technologies to minimize heat transfer and prevent boil-off, ensuring the hydrogen remains in its liquid state. These storage systems must also be robust and safe, addressing challenges related to the extremely low temperatures and the flammability of hydrogen.

The major global suppliers of Cryogenics Liquid Hydrogen Storage include Linde, Air Products, Air Liquide, Messer, Kawasaki, Cryogenmash, Chart Industries, Iwatani,

Gardner Cryogenics, Hydrogenious LOHC Technologies, Worthington Industries, INOXCVA, Auguste Cryogenics, Air Water (Taylor-Wharton), etc. The global players competition landscape in this report is divided into three tiers.
