Research Summary

Crystalline fructose is a natural sugar derived from fruits and honey. It is a monosaccharide, meaning it consists of a single sugar unit, and has the same chemical formula as glucose but differs in structure. Crystalline fructose is a white, odorless, and sweet-tasting crystalline powder that is often used as a sweetener in various food and beverage products. Due to its high sweetness level, it is commonly used in low-calorie and reduced-sugar products as a sugar substitute. Crystalline fructose has a lower glycemic index compared to sucrose (table sugar), meaning it causes a slower rise in blood sugar levels, making it a popular choice for people with diabetes or those looking to manage their blood sugar levels. However, like all sweeteners, it should be consumed in moderation as part of a balanced diet.

The major global manufacturers of Crystalline Fructose include Tate & Lyle, ADM, GALAM, Gadot, DANISCO, Xiwang Group, Hebei Huaxu, Spring Young, etc. The global players competition landscape in this report is divided into three tiers.
