Research Summary

CSP NFV Management and Orchestration (MANO) solutions are specialized software platforms designed for Communication Service Providers (CSPs) to efficiently manage and orchestrate their Network Functions Virtualization (NFV) infrastructure. NFV is a network architecture approach that aims to virtualize and abstract traditional network functions, such as routing, firewalls, and load balancing, into software-based virtual machines or containers running on standard servers. CSPs leverage NFV to enhance network flexibility, scalability, and cost-efficiency. However, managing and orchestrating numerous virtualized network functions can be complex and challenging. CSP NFV MANO solutions provide a centralized and automated system to deploy, monitor, and scale virtual network functions dynamically. These solutions ensure efficient resource utilization, optimize network performance, and enable rapid service deployment, helping CSPs deliver more agile and innovative services to their customers.
